

Fig. 3

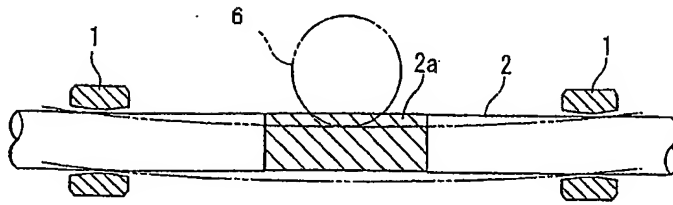

Fig. 4

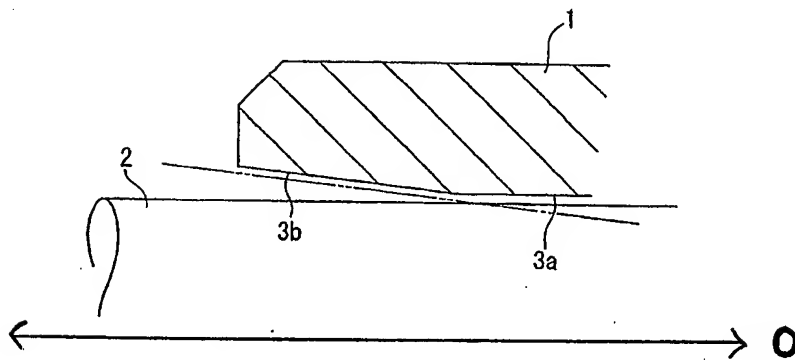

Fig. 1 is a perspective view of a wedge-shaped member 11. The member has a tapered top surface that slopes downward from right to left. This tapered surface is divided into three distinct regions labeled 13a, 13b, and 13c. Region 13a is the rightmost and steepest part, followed by region 13b in the middle, and region 13c is the leftmost and least steep part. The member 11 is shown resting on a horizontal surface 2, which is indicated by a line with a wavy end on the left. The member's cross-section is filled with diagonal hatching lines.
